Handwritten Signature Verification using Local Binary Pattern & KNN

A Project Report

Submitted by

Tejas Jadhav

Under The Guidance Of

Prof. Abhay Kolhe

in partial fulfillment for the award of the degree of

M. TECH.
in
COMPUTER ENGINEERING
at

SVKM's NMIMS,
Mukesh Patel School of Technology Management & Engineering,
Mumbai

2018 - 19

CERTIFICATE FROM INTERNAL MENTOR

This is to certify that the project synopsis entitled “Handwritten Signature Verification using Local Binary Pattern & KNN” is the proposed work by Tejas Jadhav of M. Tech. (Computer Engineering), MPSTME (NMIMS), Mumbai, during the III/IV semester of the academic year 2018 - 2019 is verified by me.

The presentation for the same is also verified by me.

CERTIFICATE FROM EXAMINERS

This is to certify that the project entitled “Handwritten Signature Verification using Local Binary Pattern & KNN” is the bonafide work carried out by Tejas Jadhav of M.Tech. (Computer Engineering), MPSTME (NMIMS), Mumbai, during the IV semester of the academic year 2018-2019 in fulfilment of the requirements for the award of the Degree of Masters of Technology as per the norms prescribed by NMIMS. The project work has been assessed and found to be satisfactory.

DECLARATION

I, Tejas Jadhav, Roll No. B002, M.Tech (Computer Engineering), IV semester understand that plagiarism is defined as anyone or combination of the following:

1. Un-credited verbatim copying of individual sentences, paragraphs or illustration (such as graphs, diagrams, etc.) from any source, published or unpublished, including the internet.
2. Un-credited improper paraphrasing of pages paragraphs (changing a few words phrases, or rearranging the original sentence order)
3. Credited verbatim copying of a major portion of a paper (or thesis chapter) without clear delineation of who did wrote what. (Source: IEEE, The institute, Dec. 2004)
4. I have made sure that all the ideas, expressions, graphs, diagrams, etc., that are not a result of my work, are properly credited. Long phrases or sentences that had to be used verbatim from published literature have been clearly identified using quotation marks.
5. I affirm that no portion of my work can be considered as plagiarism and I take full responsibility if such a complaint occurs. I understand fully well that the guide of the seminar/ project report may not be in a position to check for the possibility of such incidences of plagiarism in this body of work. I declare that the written submission represents my ideas in my own words and where others ideas or works have included; I have adequately cited and referenced the original sources. I also declare that I have adhered to all principles of academic honesty and integrity and have not misrepresented or fabricated or falsified any new idea/data/fact/source in my submission. I understand that any violation of the above will cause for disciplinary action by the institute and can also evoke penal action from the sources which have thus not been properly cited or from whom proper permission has not been taken when needed.

Signature of the Student:

Name: Tejas Jadhav

Roll No. B - 002

Place: Mumbai

Date:

Acknowledgement

This has been the light of the day due to valuable contribution of certain individuals whose constant guidance, support and encouragement resulted in the realization of my project. I am grateful to my Guide Prof Abhay Kolhe for providing me the necessary help and encouragement whenever I needed, which has resulted in the success of my project.

I take this opportunity to thank Dr. N. T. Rao, Dean of Mukesh Patel School of Technology Management & Engineering, NMIMS University Mumbai for providing a healthy environment in the college, which helped me in concentrating on my task.

I would also like to thank Dr Pravin Srinath, HOD of Computer Science Department of Mukesh Patel School of Technology Management & Engineering, NMIMS University Mumbai for providing his invaluable guidance, comments and suggestions throughout the course of the project.

This project would not have been possible without the efforts of Prof Prashasti Kanikar and all the staff members of M.Tech Computer Science department, without whose constructive suggestions and valuable advice, the simple idea, which had born in me, would not have been able to blossom into a successful project.

Last but not the least, I am grateful to all my friends and my parents for their constant support throughout the course of this project.

ABSTRACT

Whether one signs a petition, work documents, contract, or wants to approve payment of a check, he/she uses personal signature to do all those things. An offline signature verification method has been described in this designed project and the subsequent project report. Handwritten signature has been critical person identification technique for decades. The objective of this paper is to give away an efficient biometric signature recognition and verification techniques The study intends to give away information all about the application of biometrics i.e. signature detection and also about the various stages that are necessary to be studied by a designer while creating an application that will use it. The system works in different stages which includes pre-processing, LBP image conversion, feature extraction, and classification. A total of 40 different signature recognition approaches were read and studied before designing the system here that are been taken from different research papers. The output obtained is evaluated in the papers itself by performing experimental analysis and can be compared with another existing system in this paper.
